LIST OF SYSTEM DATA SETS  
Explanation of Table Categories and Symbols

DATA SET NAME	Groupings and names of particular sets of files available in ADAAS. A set typically includes a dictionary file, a data file, and very often a label file. The FILES command in ADAAS can provide information on the set make-up.
DATA KEY NAME	Descriptor used to access the data set with the DATA command in ADAAS.
NO OF RECORDS	Total number of records, or cases, making up the data set.
NO OF VAR	Number of variables in the data set.
TYPE	Type of the data set. The type meanings are defined as follows: Acc - Accident Di - Driver Incident Ex - Exposure Inj - Injury Occ - Occupant Inj - Injury (OIC) Ped - Pedestrian Per - Person (Occupant/Pedestrian) Veh - Vehicle 2vh - Two Vehicle Accident 3vh - Three (or more) Vehicle Accident
BOOK NUMBER	Identifying number of the codebook (if one exists) that describes the data set. Contact the Data Center for information on their availability. (The table that follows, lists all codebooks printed to-date.) The "L" suffix indicates that a label file is included in the data set. If labels are available, the CODES command in ADAAS can provide information on variables and code value names in much the same way as a codebook.
